

Connect with Lourdes for Patient Results

Lourdes Health System is offering primary care physicians and internal medicine specialists in Burlington, Camden and Gloucester counties remote access to its electronic medical record.

Through a secure Internet connection and password, physicians can view a variety of patient data, including laboratory and radiology results, radiologic images and transcribed reports.

“This ensures continuity of care for the patient, elimination of the need to go through a third party to obtain results, around-the-clock availability and support, physician convenience and ultimately streamlines patient care. Physicians can get this information from the convenience of their computer,” said **Denise Evans**, Lourdes assistant director of information services.

“Physicians can have confidence that if their patient comes to Lourdes for a test, they can get the result as soon as it is available.”

Lourdes establishes the connection at no cost to the physician and offers free 24-hour technical support.
